Docket No.: 0941-0918P

AMENDMENTS TO THE SPECIFICATION

Please amend the paragraph beginning on page 6, line 12, as follows:

--Figs. 5a and 5b show a first embodiment of a fan housing in a fan assembly of the

present invention. The fan housing 5 includes a main body 51, a first section 52, a second

section 53, a fastening structure 54 and a screw 55, wherein the screw 55 has two ends 551, 552.

Both the first and second sections 52 and 53 are disposed on the main body 51. The first section

52 has a through hole 521. The fastening structure 54 has a threaded hole. In addition, the fan

housing 5 further includes a base 511 for supporting the stator and rotor, and a plurality of ribs or

stator blades 55 disposed between the base 511 and the main body 51. The stator blades 55 have

shape similar to those of rotor blades 55 of the rotor, and have the same inclined angle.-

Please amend the paragraph beginning on page 6, line 24, as follows:

--In Fig. 5b, a gap G is formed between the fist section 52 and the second section 53. The

fastening structure 54 is placed in the gap G. When the fan assembly is fixed onto a system

frame 56, the screw 55 passes through the hole 561 in the system frame 56 and then passes

through the through hole 521 of the first section 51, and finally engages with the threaded hole

541 of the fastening structure 54. The second section 53 prevents the fastening structure 54 from

moving along an axial direction of the screw 55, and prevents one end 552 of the screw 55 from

being exposed.--
